Disposable food & takeout containers

Oyster shell-based composite materials for commercial food packaging.

Rectangular meal boxes and fitted lids | Product samples

Compartment meal boxes

Round bowls and lids

For packaging distributors, wholesalers, restaurant chains, caterers and foodservice suppliers. Custom dimensions, closures and material routes are reviewed against the intended application.

From discarded shells to packaging

Recovered marine minerals from discarded oyster shells are combined with polymer systems to create material options designed to reduce conventional plastic consumption.

Discarded oyster shells

Composite material pellets

Material selection

Durable circular polymer formulations are non-biodegradable. Separate biodegradable and bio-based formulations may be developed for specific projects. Food-contact suitability, temperature limits and biodegradability or compostability claims require validation for the final product and destination market.

Information for a quotation

- Container dimensions, capacity, compartments and lid design
- Food type, fill weight, filling temperature and intended use
- Destination country and required food-contact or other test documents
- Order quantity, case packing, printing and delivery terms
